

// HELLO, I'M —

Mustafa Joudeh

Back-end Developer

I build reliable, secure, and highly scalable web architectures and APIs using C#, .NET Core, and relational database management systems.

ABOUT ME

Building Solutions With .NET

I am a dedicated, career-focused Junior .NET Backend Developer eager to construct high-performance web APIs and secure, database-driven enterprise architectures. My foundational training centers around strong OOP principles and strict SOLID design.

Equipped with deep practical knowledge of C#, SQL Server, and relational databases, I specialize in designing structured relational schemas, indexing, and optimizing T-SQL queries to handle robust backend data models.

My technology stack features modern backend implementations using ASP.NET Core Web API, ADO.NET for precision lower-level data control, and Entity Framework Core for robust ORM mapping.

PORTFOLIO PORTAL

Featured Engineering Projects

ASP.NET CORE · SQL SERVER

E-Commerce REST API

An enterprise-ready RESTful endpoint architecture featuring secure JWT authentication, the clean repository pattern, and robust pipeline life-cycle validations mapped to SQL Server.

[View Repository](#)

EF CORE · CLEAN ARCH

Task Management Engine

Multi-tenant tracking backend optimized with complex Entity Framework Core relations, fast LINQ filters, custom stored-procedures, and high-performance transactional boundary controls.

[View Repository](#)

ADO.NET · T-SQL

Student Portal Database

Scalable university registrar database layer utilizing native ADO.NET pipelines, stored procedures, audit logging triggers, and heavily indexed relational tables.
