

SECTION_01: HERO_LANDING

Hello, I'm SUB_EYEBROW

Mustafa Joudeh

Back-end Developer

I build reliable and scalable web applications using C#, .NET, and ASP.NET Core.

ABOUT ME SECTION_02: ABOUT

Building Solutions With .NET

I am an aspiring and dedicated Junior .NET Backend Developer eager to build high-performance web APIs and secure, database-driven enterprise architectures. My foundational training focuses on OOP principles and strict adherence to SOLID design.

Equipped with deep practical knowledge of C#, SQL Server, and relational databases. I specialize in designing structured relational schemas, indexing, and optimizing T-SQL queries to handle robust backend data models.

My stack includes hands-on implementations using ASP.NET Core Web API, ADO.NET for precise lower-level data control, and Entity Framework Core for robust ORM mapping. Passionate about architecture designs that optimize speed, scale, and long-term maintainability.

Quick Reference Metadata

MY SKILLS SECTION_03: SKILLS_GRID

Technical Skills

Programming Languages

SKILL_CAT_A

C#, C++, JavaScript, SQL

Backend Frameworks

SKILL_CAT_B

.NET, ASP.NET Core Web API, ADO.NET, Entity Framework Core

Database Management

SKILL_CAT_C

SQL Server, T-SQL (Stored Procedures, Triggers, Views)

Tools & Platforms

SKILL_CAT_D

Git, GitHub, Visual Studio, VS Code, Postman, Swagger

Architecture & Concepts

SKILL_CAT_E

OOP, SOLID, REST APIs, Clean Architecture, LINQ, Data Structures

MY PROJECTS SECTION_04: PROJECTS

Featured Projects

E-Commerce API

ASP.NET Core API showcasing JWT authorization, repository pattern, integration with SQL Server databases, and order lifecycle management routines.

[VIEW PROJECT](#)[REPOSITORY_LINK](#)

Task Management System

A task tracking database application with advanced relational storage constraints built using Entity Framework Core, LINQ processing, and clean domain services.

[VIEW PROJECT](#)[REPOSITORY_LINK](#)

Student Portal API

Backend directory logic managing registrations, course allocations, and system audits utilizing precise ADO.NET parameters and optimized database stored procedures.

[VIEW PROJECT](#)[REPOSITORY_LINK](#)
